Cordless doorbell P5733W

Unpack, plug in and ring. It's that easy with the **wireless** doorbell, available in **multiple colours**. You can use it in your apartment or family home, but it will also be perfect for your business premises or office. It will surprise you with a long **button range of up to 150 m** and one of the **36 preset melodies** to alert you to an incoming visitor.

Despite the weather

No more **no more pulling wires and drilling into walls**. Button and bell communicate wirelessly **with each other** over a distance of **up to 150 meters**. The **waterproof button with IP44 protection** is perfectly prepared for inclement weather. You can also place it safely in an outdoor, unprotected location next to a door, gate or garage. The doorbell is designed for indoor use. The push button and doorbell set has a **self-learning function** - the push button generates its own pairing code, which the doorbell accepts and stores in its memory. Thanks to the "self-learning" function, neighbouring bells are not affected.

Flattering to your ear and eye

It won't wake you up with a classic "crrr" or "ding dong". You have a total of **36 melodies** to choose from and thanks to the pre-set **four volume levels** you can always select the optimal ringing intensity. If you really don't want to miss any visitors, this doorbell can play a melody of up to 110 dB **and inform you with a distinctive light signal**.

Just unpack and use

COOKIE SETTINGS

When you buy a doorbell, you will especially appreciate its easy installation, long range, zero maintenance and reliability. All this and more this **battery button and home doorbell socket kit** delivers on all counts. The **1×3V CR2032 battery** powering the button is **included** so there's nothing stopping you from using the doorbell right away. You no longer have to worry about visitors not ringing your doorbell, because you can **connect multiple receivers/indoor units to one button**, which you can place in the basement, gazebo or attic, for example. Up to **eight** buttons can be paired with the doorbell, which can be purchased separately. So you can install them **in all the places you get visitors**.

Zvonek bezdrátový AC P5733G, P5733S, P5733W | EMOS

Can I place the button on a stainless steel surface?

Will the bells work without interfering with each other? I would like to get 2 sets.
